

CloudFinder for Office 365

Backup. Search. Restore.

Axcient

Protect business productivity applications with CloudFinder for Office 365

Data loss happens, even in the cloud. But can your organization afford to lose emails and work documents?

Office 365 is the go-to productivity suite for businesses. Unfortunately, user error, malware, accidental deletion or malicious employees can pose serious risks to emails and work documents. The cost to organizations that experience data loss varies depending on industries – but in all cases it is significant.

Eliminating user error and other causes of data loss is unlikely. However, it is possible to minimize its cost and disruption to the organization. CloudFinder for Office 365 ensures that the data used in an organization's instance of Office 365 is backed up, restorable, and protected.

CloudFinder for Office365 can be used to perform backup and restore of Office 365 emails, contacts and calendar (Exchange online) and files, folders and document libraries in sites, subsites in both: the classic site collections and the modern Team sites, communication sites (SharePoint online and OneDrive). Organizations that deploy CloudFinder for Office 365 can rest assured that all of their critical Office 365 data is backed up to the encrypted, tamper-proof Axcient Cloud.

With CloudFinder, all of your Office 365 data is a click away. Using SmartSearch, an administrator can complete a full-text search on data across Exchange online and SharePoint online and complete a single click restore, instantaneously. Administrators can instantly search Office 365 data with rich filtering and select the data to restore or export to a folder to satisfy e-discovery requests. In addition, detailed dashboards, reports, and monitoring of all backup activities demonstrate how CloudFinder is working to protect your Office 365 data.

Finally, the CloudFinder platform significantly reduces the burden placed on administrators by supporting today's most popular SaaS applications, including Office 365. From a single interface, administrators can perform cross-service instant full-text searches and point-in-time restores, making data easy to find and recover.

KEY FEATURES:

Automated backup of Office 365 data with the Axcient Cloud, providing total data protection

Specific and/or mass restores of archived data into Office 365 applications

Export office 365 data to local storage

Instant full-text search and rich search filtering, ensuring data accessibility

Comprehensive overview of Office 365 data backup, reducing administrative burden

The most comprehensive and complete regulatory compliance in the industry

Military-grade encryption, exceeding industry standards

Features:

AUTOMATED BACKUP OF OFFICE 365 DATA IN THE AXCIENT CLOUD

- Backup Office 365 emails, contacts and calendar
